### TREATING MANUAL GEARBOXES AND REAR AXLES / DIFFERENTIALS WITH

### RVS TECHNOLOGY™ TRANSMISSION TREATMENT

- RVS Technology™ Treatment makes it possible to restore different kinds of wearing parts to their original condition provided they are only worn out but not damaged.
  - If there are active Teflon, molybdenum, or other additives in the oil, the unit must be flushed thoroughly before the treatment.
  - Before starting the treatment procedure, make sure that there are no oil leaks in the device and that the condition and quantity of oil corresponds to the manufacturer's recommendations.
- Every package includes the quantity of compound required for one treatment of transmission of the indicated size.

#### TREATMENT

step by step

Set the hose on the syringe end.

Squeeze the contents of the small tube into the syringe.

Set the piston in the syringe, turn the syringe with the hose end upwards and squeeze the air out of the syringe.

Remove the upper oil cap of the gearbox or differential and take approx. 20 ml of oil from the device with the syringe.

Take air into the syringe until the piston edge is at the 60-ml marking.

Shake the syringe until the mixture inside is homogenous.

Squeeze the contents of the syringe into the gearbox / differential.

Set the oil cap back on and tighten it.

Lay the vehicle down and drive it. Avoid running the engine over 3000 rpm during the first hour. When treating a gearbox, run the vehicle and engine brake on every gear during the first hour (urban driving conditions).

The treatment is complete after a mileage of 1000 km (600 miles) (tractors: after approx. 20 h of operation).

#### Notice

Transmissions, the mileage of which exceeds 200,000 km (120,000 miles), may require another treatment that should be started after a mileage of approx. 400 km (250 miles) after completion of the first treatment.

#### **Storing and safety instructions**

- Store at temperatures below +40 °C (105 °F).
- In case of skin contact, wash with lukewarm water and soap.
- If the product gets in your eyes, it may cause irritation – flush with water and consult a doctor if the irritation continues.
- If the product is swallowed, flush the mouth with water and consult a doctor. Do not induce vomiting!
- In case of fire, any extinguishing materials except water can be used.
- Keep the product out of reach of children.
